

Global DataGuard

ALL-N-ONE SECURITY MODULE

PRODUCT BRIEF

EVERY DAY, YOUR NETWORK IS OPEN TO ZERO-DAY VULNERABILITIES, BRUTE-FORCE ATTACKS, EVOLVING HACKER TOOLS, AND SO MUCH MORE. IS YOUR SECURITY SOLUTION TOUGH ENOUGH TO STOP TODAY'S CYBERCRIMINALS BEFORE THEY CRIPPLE YOUR NETWORK?

If you're not sure, then you should call Global DataGuard®. We're the only company with a VMware-based All-n-One Security Module™ (ASM) for premise-based and virtualized environments.

It's a completely integrated, easily affordable and simple to deploy security solution designed from the ground up for small to medium businesses and small to medium enterprises just like yours. It has everything you need to protect your on-premise and private cloud network – at a price that's designed to fit your budget.

The VMware-based ASM™ makes available to you the same enterprise-class software on which multi-national corporations spend significant portions of their IT budget. It includes industrial-strength applications like intrusion detection and prevention, adaptive network behavior analysis and correlation, network access and policy monitoring, vulnerability scanning and management, prioritized threat management for network, global and vendor threats and vulnerabilities, security and event log management and monitoring, and a unified service-enabled console. So you get all of the benefits without the huge price tag!

Now you can maintain greater control while effectively securing whatever mix of physical and virtual technology your network infrastructure utilizes. Because it's a fully integrated, powerful system that's easy-to-use and install, the ASM is your best choice for cost-effective, premium security features that can meet your company's most critical business needs – with up to a 70% reduction in ownership costs over traditional enterprise solutions or standalone products.

THE ASM UNIFIES THESE INDUSTRY PROVEN SECURITY APPLICATIONS INTO A SINGLE VIRTUAL SERVER WITH A SERVICE-ENABLED CONSOLE:

- Adaptive Network Behavior Analysis & Correlation
- Intrusion Detection & Prevention
- Vulnerability Scanning & Management
- Prioritized Threat Management for Network, Global & Vendor Threats & Vulnerabilities
- Security & Event Log Management & Monitoring
- Network Access & Policy Monitoring

UNIFIED SECURITY FOR ON-PREMISE AND VIRTUALIZED ENVIRONMENTS

Implementing a security system by cobbling together discrete security appliances and applications from competing security companies is an all too common scenario for IT security departments, and integrating, managing, monitoring and correlating discrete security events, alerts, logs and reports into actionable security threats can cripple resource-limited businesses.

With the All-n-One Security Module, however, you can easily and cost-effectively predict, prevent and block threats that would otherwise severely impact your network and your business. Plus, the ASM can help you to bridge the gap between your premise-based and virtualized networks. It's a centrally managed security system that can be offered with 24/7 managed security services or as a stand-alone virtual security server. And because it uses an underlying, adaptive architecture to fully integrate a comprehensive applications suite, you don't waste valuable resources trying to connect the dots between different security products and platforms.

THE SECURITY STANDARD FOR SMALL BUSINESSES & SMALL TO MEDIUM ENTERPRISES

What does all that mean? It means that your security worries are over because now you can afford a simple, ready-to-use system that:

- Retains and correlates suspicious raw packet data for rolling 14-30 days to provide early warnings of security threats that other products cannot see;
- Correlates alerts for up to 6 months and maintains behavioral profiles for up to 2 years;
- Automatically adapts to evolving networks using its predictive functionality;
- Shares results with all ASM security applications to help prevent and block threats before they harm your network;
- Provides an easy-to-use, instant view of prioritized security threats and the underlying data that created them;
- Enables you to supplement your IT staffing requirements with 24/7 managed security services that typically costs less than one full-time employee and can be purchased with or without a contract; and
- Offers unparalleled price/performance in an easy-to-use system that's designed specifically for your business environment.

THE GLOBAL DATAGUARD ADVANTAGE

Scalable

With integrated applications that can be purchased individually or as a complete system, you can easily add security features when you need to, and grow your security solution along with your network.

Flexible

The ASM can work alongside your existing security products so your IT investment is protected.

Manageable

The ASM gives you immediate, centralized access to prioritized security threats, plus 24/7 managed security services designed to meet your specific IT staffing requirements.

Cost Effective

With up to a 70% reduction in ownership costs over other enterprise-class solutions or stand-alone products, the ASM is clearly the most cost-effective and simple to deploy security system for your current and future security needs.

VMWARE-BASED ALL-N-ONE SECURITY MODULE

N-2520-S/F

- 10/100/1000Mb
- On premise virtualized server
- Rack mountable
- 2 Intel Xeon Quad-Core Processor
- Ideal for mixed physical and virtual environments

MANAGED SERVICES TO MEET YOUR IT STAFFING NEEDS AND BUDGET

The choice is yours. Whether you need a little help or a lot, our SRM Managed Security Services™ can be customized to fit your individual IT staffing needs. We can provide you with immediate access to the ASM solution with no contract required, or you can purchase, install and manage your ASM system on your own.

Either way, we can economically and flexibly augment your company's IT security staff with 24x7 managed security services – whether it's for off-hours, holidays or customized timeframes based on your peak management requirements. With or without a contract, our managed and professional services can provide you with real-time visibility, control and oversight of your entire security environment. And we can help your IT budget go the distance through significant cost savings in capital expenditures, training and staffing.

GLOBAL DATAGUARD – MAKING COMPLIANCE SIMPLE

Now that your network security solution is up and running, you may be asking yourself, “is my network compliant with industry regulations?” With the All-n-One Security Module, you can be confident that it is. At Global DataGuard, we understand that compliance depends on a number of critical factors. From auditing to technology, process and policy, we know that your organization has unique compliance requirements. That's why we take a holistic approach to compliance – from PCI and SOX to HIPAA and NERC CIP – tailoring our services to your company's current needs. Rest assured that Global DataGuard, a certified PCI vendor, can provide the partnership required to help you efficiently achieve and maintain ongoing regulatory compliance.
