PREDICT AND PROTECT

SRM MANAGED SERVICES

FLEXIBLE SRM MANAGED SECURITY SERVICES

Global DataGuard's Flexible Security Risk ManagementSM (SRM) Managed Security Services

For a growing number of organizations, the answer to the high cost, complexity and uncertainty surrounding network security is simple: Global DataGuard's SRM Managed Security Services.

GLOBAL DATAGUARD'S SRM MANAGED SECURITY GIVES YOU:

- Immediate turnkey access to the leading Enterprise UTM solution, an integrated system including packet analysis, intrusion detection, intrusion prevention, adaptive behavioral analysis, vulnerability scanning, vendor alerts, correlation systems, an asset database and a security dashboard. GDG's solution is effective from day one.
- 24/7/365 monitoring of your network, managed vulnerability scanning and incident response
- A way to economically augment your team access to GDG's security reports
- Visibility, control and oversight: Easily view everything GDG is doing for you.
- Actionable remediation information to prevent network security problems as well as dealing with immediate security issues
- Cost savings through reduced capital expenditures, training and staffing
- A more efficient team: Redeploy staff to revenue-enhancing projects while GDG takes care of the time-consuming monitoring and analysis.
- Reduced risk of obsolescence
- Flexibility: Use GDG's Managed Services as little or as much as you want, from full-time to nights and weekends or holidays.
- Easy provisioning
- Turnkey services or on demand services with product purchase

With GDG's SRM Managed Security Services, companies decide when their internal resources are responsible for network security or when they'd prefer GDG to help. They can flexibly outsource 24/7/365 or as little as they like.

WORKING TO YOUR SCHEDULE

With GDG's SRM Managed Security Services, you decide when your internal resources are responsible for network security or when you'd prefer GDG to help. You can flexibly outsource 24/7/365 or as little as you like. Alternatively, you may outsource by contract—again, as little or as much as it takes: off-hours, holidays or customized timeframes to suit your specific needs.

GDG'S ENTERPRISE UTM ARCHITECTURE

Intelligence and adaptability are the keys to Global DataGuard's Enterprise UTM solution. Each layer of protection complements and augments the others, with intelligent behavioral analysis and correlation making the GDG technology difference. The results: Early warning of threats other solutions cannot see, far fewer false positives, cost savings and more thorough compliance. GDG tells you where you're vulnerable, who's trying to attack you, how they're doing it and what you can do to shut the threats down. Simply put, looking for odd behaviors in network traffic is the best way to preemptively sniff out malicious activity before damage occurs. That's the GDG way, and that's why it's good to have us on your side.

PROFESSIONALS YOU CAN RELY ON

Our professional security specialists will be standing by to answer questions about alerts, security response tickets, intrusion detection and prevention alerts, packet analysis, vulnerability scan reports and the security dashboard. And they maintain communication with security information sources, including SANS, CERT, DShield and others.

Global DataGuard: We're good, we're thorough and we're there whenever you need us.
